

Telemetry + AI Demo Certification Packet

Generated: 2026-05-20

Repository: `/Users/ramakrishna/Desktop/Teja/Dashboards`

Executive Summary

This packet certifies demo readiness for:

1. Dashboard stability
2. API-to-UI truthfulness
3. AI pipeline visibility
4. Human-in-the-loop governance
5. Demo-data cleanup safety

Important: This is ****demo certification****, not an absolute production guarantee.

Gate Results (Current Run)

- `cleanup:test`: PASS
- `verify:clean`: PASS
- `test:contract`: PASS
- `test:fixtures`: PASS
- `test:agent`: PASS
- `test:pipeline`: PASS
- `test:ui`: PASS

Evidence:

- `evidence/test\_contract\_output.txt`
- `evidence/test\_fixtures\_output.txt`
- `evidence/test\_agent\_output.txt`
- `evidence/test\_pipeline\_output.txt`
- `evidence/test\_ui\_output.txt`
- `cleanup/cleanup\_test\_output.txt`
- `cleanup/verify\_clean\_output.txt`

Browser Audit Highlights

Reference: `evidence/dashboard\_audit\_report\_fresh.md`

- Core APIs verified with 200 in direct checks:
 - `/api/cache-status`
 - `/api/executive-summary`
 - `/api/recommendations`
 - `/api/governance/cache-coherence`
 - `/api/governance/mutation-lifecycle`
- Tabs audited: Overview, Telemetry, Governance
- Known risk observed in browser stream polling logs: repeated `401` on some governance stream/list polling requests. This must be watched live in demo; fallback is to continue with direct API-backed widget proof.

AI Layer Coverage

See `DEMO\_PIPELINE\_PROOF.md`.

This packet includes:

- input -> classification -> recommendation -> KPI materialization chain
- segregation proof table
- timing capture procedure (`T0/T1/T2`)

HITL Coverage

See `DEMO\_HITL\_PROOF.md`.

This packet includes:

- action mutation flow (approve/reject/defer)
- actor attribution checks
- timeline/history verification

Data Safety and Cleanup

See `DEMO\_DATA\_POLICY.md`.

Rules enforced:

- temporary dataset only when live data is sparse
- mandatory cleanup and zero-residue verification

Recording Script

See `DEMO\_RUNBOOK.md` for exact record-on/record-off points, click sequence, narration cues, and sparse-data fallback branch.

Final Go/No-Go

Use `DEMO\_RELEASE\_GATE.md` checklist directly before recording the final take.
